## Topics covered in this course will include...

### History

An examination of the notion that science and Christianity have historically been "at war"

An examination of the emergence of the Creationist movement in 20th Century America

### Science

A consideration of the scientific definition of a "theory"

An explanation (in laymen's terms) of the most recent scientific findings pertaining to the origins of the universe, life, species, & humans

An examination of six models (four of them Christian) for interpreting the scientific findings on origins

### Scripture

A comparison of 4 different Biblical interpretations of Genesis 1-3, which each maintain an emphasis on the authority of Scripture

### Theology

A consideration of how the Doctrines of the Fall and Original Sin might be re-imagined in light of evolution

A discussion of why all of this matters, including how the prevalent secular perception that Christianity is irreconcilable with science could be impacting the success of the Great Commission
